

# Tutorial: Framerate Unlocking

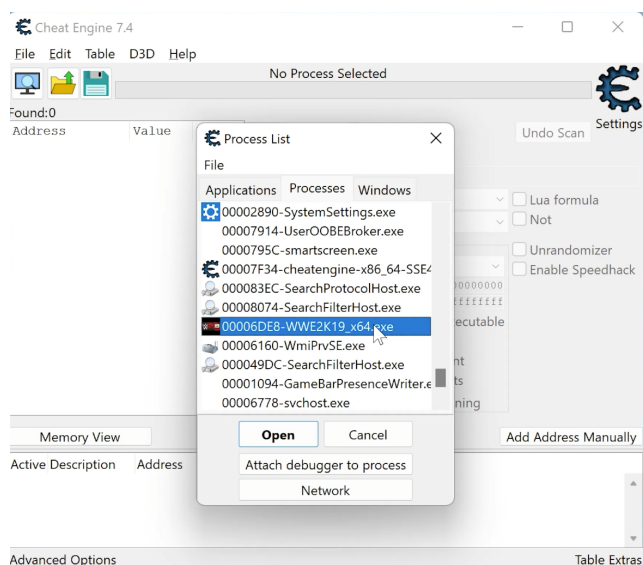

## Prerequisites

Cheat Engine	<a href="#">Download Here</a>
60 FPS Cheat Table File	<a href="#">Download Here</a>

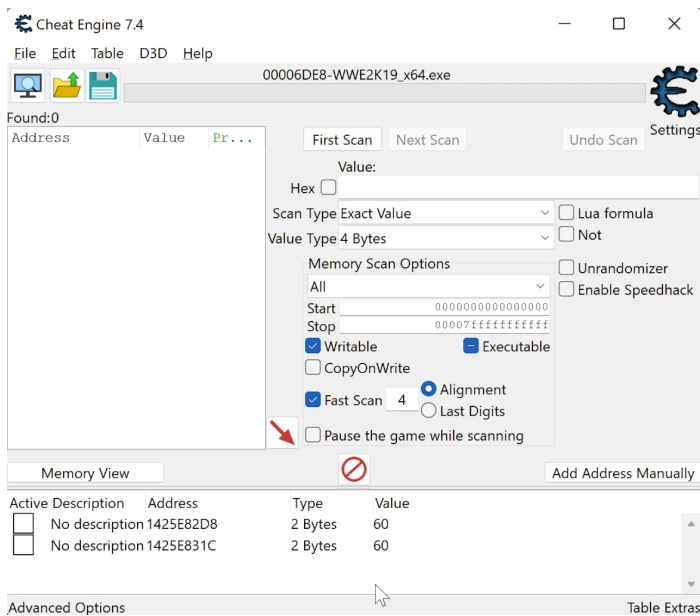

## Step #1 |

This is a very simple process, but must be followed with precision and in the correct order.

- Launch your WWE 2K19.
- Once launched (e.g. main menu), minimize **WWE 2K19** and open '*Cheat Engine*'.
- Navigate to and press the monitor icon, search for the **WWE 2K19** process. Click '*Open*'.

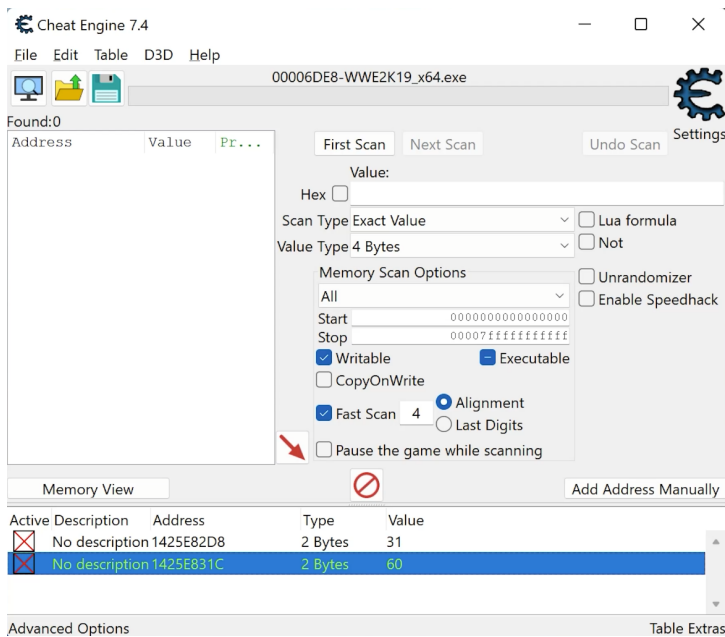

- Click the folder icon with the arrow (Ctrl + O shortcut) and select the '*60 FPS Fix*' file.
- You will now see addresses appear. Notice your values are both on 60. Do **not** enable now.

- Double click the value for the address ending in **D8** and change it to 31.

30 and below slows the game and 32 and above speeds it up. Keep it at **31**

- Your **values** should now look like this when you are done.

## Step #2 |

The hard part has been done, you are now ready to enable the frame unlocking.

- In Cheat Engine, click the boxes in the first column to activate the fix. Y
- Unminimize your game.

- Enter **Create an Entrance** to test.

If this has been a success, you will now notice a significant change in the fluidity of your game.

## Optional |
